Configurando Instancia Loki

Virtualización
Loki get started

25 de marzo de 2024

The screenshot shows the 'Settings' page for a Loki data source named 'loki-1'. At the top, there is a notification box encouraging the user to configure the data source or use Grafana Labs' managed service. Below this, the 'Name' field is set to 'loki-1' and the 'Default' toggle is turned off. A message states: 'Before you can use the Loki data source, you must configure it below or in the config file. For detailed instructions, [view the documentation](#).' The 'Connection' section has a 'URL' field set to 'http://localhost:3001/'. The 'Authentication' section shows 'No Authentication' selected from a dropdown menu. The 'TLS settings' section includes three unchecked checkboxes: 'Add self-signed certificate', 'TLS Client Authentication', and 'Skip TLS certificate validation'.

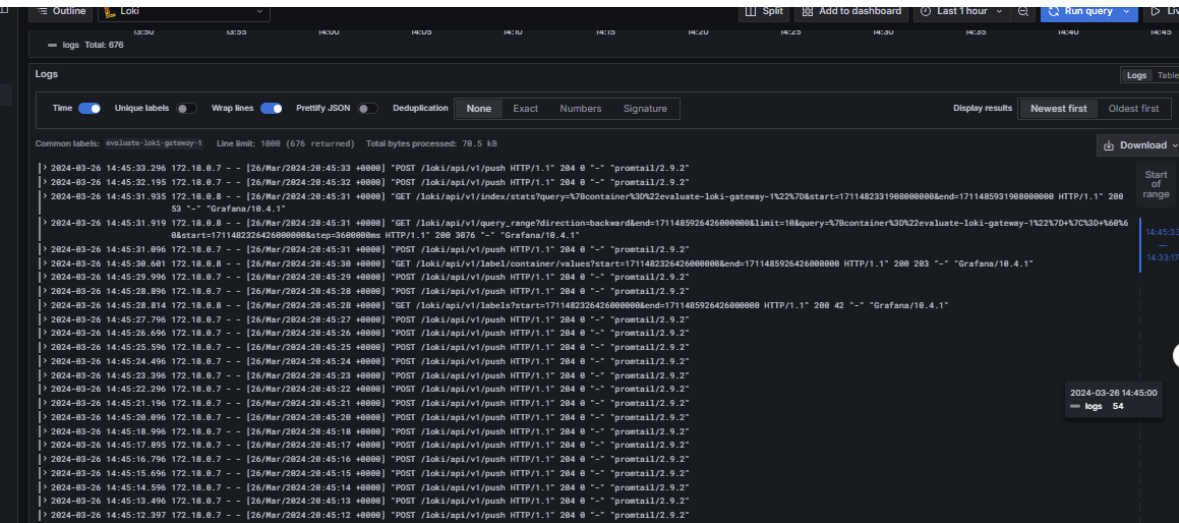

Usando loki (GUIA)
